## DETAILED ACTION

## Claim Rejections - 35 USC § 102

 The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 rejected under 35 U.S.C. 102(b) as being anticipated by Morita et al. (Morita). Morita teaches a fluid distribution apparatus comprising a stationary member 3 in which at least two fluid supply passages are formed. The at least two fluid supply passages are comprised of grooves 31, ports 33, which ultimately are connected to supply nozzles 32. According to figure 2, each rib is at a different elevation. In addition. Morita discloses a rotary portion 41 that is in sliding contact with the fixed portion 3. The portion 41 has at least four two passages 411 formed therein extending along the rotating axis. These passages culminate in passages 4111 and are disposed in different radial positions at virtually equal intervals and are connected to supply grooves 31 which are stacked within the column (see figure 1-2, col. 6 lines 35-50). Thus, the passages culminate in areas that are of different elevations and have different radial positions. As the rotary portion rotates, the discharge passages are connected to the supply passages in the stationary member such that fluid travels to a communication passage 51 reading on a nozzle, as it ejects fluid into vessel A1 for what can be considered a rinsing process. The device is entirely capable of working with fluids, such as common liquids or gases. Furthermore, the agent used is not considered to be a

patentably distinct feature of the invention. Thus, the disclosure of Morita anticipates the current claims.

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JASON HECKERT whose telephone number is (571)272-2702. The examiner can normally be reached on Mon. to Friday, 9:00 - 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Barr can be reached on (571)272-1414. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
